Date: 03 May 2025
Project: Freelance Platform – Project Management & Payments
Attendees: Khuselo, Doyen, Salimata, Thoriso, Sesihle, Wakhiwe

Agenda
• Follow-up on Milestone Payments
• Database Permissions Bug Status
• Job Application Package – Review and Feedback
• Sign-in Module Finalization

Discussion Points

Project Management & Payments
• CSV Export: Basic export functionality has been implemented. It still needs to be tested with real data and improved for readability and formatting.
• Milestone Logic: The system now enforces milestone completion only when all associated tasks are marked as "complete." UX feedback is needed before finalizing.
• Freelancer Payment Trigger: The logic for triggering payments upon milestone completion has been confirmed. Next step involves integrating this with the database state refresh mechanism.

Database & Role Conflict Issue
• Khuselo implemented validation checks during user creation to prevent role overlap in future cases.
• A complete and permanent fix is scheduled to be finalized by midweek.

Applications Package & Job Acceptance Workflow
• The client-side interface now displays the total number of applications and each application's status.
• Accept/Reject functionality was tested. A bug occurs when multiple rejections happen in quick succession; Khuselo will implement a patch.
• A discussion on enabling messaging between clients and freelancers within the application process was held. This feature has been added to the backlog for a future sprint.

Sign-in Module
• The session persistence issue—particularly affecting Firefox—was identified and resolved during the session.
• The fix has been tested successfully and is now considered stable.

Next Steps
• The development team collaborated in an in-person working session on Saturday, 03 May,

to align efforts and resolve blockers.
• Testing and refinement of the CSV export and milestone logic will continue
