Team Sprint Planning Meeting Minutes

Date: Tuesday, 15 April
Facilitator: Salimata Mbaye (Scrum Master)

1. Task Delegation for Upcoming Sprint

- **Sesihle** will focus on **code coverage**. He intends to create his own branch to test code coverage and is currently refining his approach.

- **Khusello** has completed setting up the **database** and is ready to populate it with test data. A question was raised regarding storing usernames; however, **Simango** clarified that **no personal information** should be stored in the database.

- **Wakhiwe** presented the layout of the upcoming pages of the web app. He discussed the **frontend task distribution** with Salimata:

    - Wakhiwe will design the **Client Job Page**.

    - Salimata will design the **Freelancer Job Page**.

- **Simango** is waiting on Khusello's database setup to proceed with refinement and integration with the JavaScript files. In the meantime, he has hard-coded the team's emails to enable **admin access**.

- **Salimata** removed the **admin button** from the sign-up page and is currently working on improving the **homepage**. She also initiated a discussion on the design of the **Freelancer Job Page**.

2. Database Design Clarifications

- **Sesihle** inquired about the data to be stored in the database.

- **Thoriso** explained that when a **client creates a job**, that information will be stored in the database. A **match** occurs when a freelancer **applies for a job**.

- **Khusello** proposed adding a **username field** in the sign-up process. The team held a vote and decided **not** to include it.

3. GitHub Collaboration

- As Scrum Master, **Salimata** emphasized the importance of **regular GitHub collaboration**. All members are expected to:

    - **Pull**, **Push**, and **Commit** consistently to maintain synchronization.

Meeting adjourned.
